AutoCAD 2020 introduced features that made it popular. The most significant features include: Dynamic Input (DYN) and Dynamic Block (DYNB) This new feature is for those who are used to creating a sketch (a construction line drawing) of their design and then connecting the lines together to create a component. This is possible because the DYN option shows the sketch as a red line, and the DYNB is a grey rectangle, which you can use to connect the lines together. Instead of using the Sketch command, create a Drafting Table and then add a Dynamic Block (DYNB) on the Drafting Table and create the lines. The Dynamic Block is a gray box and connects the lines. In the image below, you see the lines connect together to form a component. This new feature makes the designing process so much easier. Legacy Graphics Tools AutoCAD 2020 introduces a new input method. This new feature is called Legacy Graphics Tools. This new feature enables users to view legacy graphics tools that are offered by AutoCAD for AutoCAD 3D (AutoCAD 3D Basic) and AutoCAD 2D. Legacy tools offer great functionality for those who are currently using AutoCAD 3D. The Legacy Graphics Tools in AutoCAD 2020 are the following: Arc Circle Draw line Drafting line Dot Glue Bevel Expand Groove Rule Stencil Text box Polyline Define surface Extrude Face Subdivide Detail box Create surface Create surface 2 Deliver Drafting check Cut Model from shape Insert face Spline Wing 3D modeling (3D) 3D solid modeling 2D editing Isometric editing 3D Printing Pasting a line Viewing a file Drafting in profile Scaling 2D Editing a block Importing Printing a view Editing Creation of splines File Mapping Morphing Indicating blocks Sketching

Various switching devices for controlling the air-conditioning or heating circuit in a vehicle are known, e.g. from DE-A1 40 41 455. In the case of this switching device, the switching status of the control device in the vehicle is displayed on a display device, which is located in the interior of the vehicle. Other known control devices are provided with a sensing device for sensing various operating conditions of the vehicle, e.g. the internal temperature of the coolant in the vehicle radiator, for the display of a display device in the interior of the vehicle which informs the driver of the vehicle of the operating state of the vehicle. Such control devices are known e.g. from DE-A1 35 38 993 and DE-A1 41 35 775. In the case of the known control devices, the temperature of the air-conditioning or heating circuit, of the coolant in the vehicle radiator or of the radiator is sensed and displayed in the display device in the vehicle.
