WinSaaS For Windows

WinSaaS is a multi-tenant SaaS web based server for Windows. The server is built as a stand-alone SaaS application that can be used either on-premise or in the cloud. Windows is the major platform used in this server.

What's New in the?

WinSaaS is a easy to use SaaS software for Microsoft based servers, such as IIS, PHP and ASP.NET. In its core we use the following Web and COM technology: Microsoft Web Server: IIS 5+, ASP.NET, PHP Microsoft COM technology: In MS COM technology we use Microsoft Windows services Server application templates designed with rapid application development (RAD) clients in mind. WinSaaS is designed to be an ideal starting point for a new SaaS company to show how SaaS can be introduced, installed and running in minutes WinSaaS is a multi-tenant, plug and play application that provides a range of services. However, many SaaS tools look like they offer the same thing. Actually most SaaS's are not SaaS at all, they are simply a piece of software sold to you or a vendor as a server or application. IIS, PHP, Microsoft FrontPage, MS Access, MS SQL Server etc. are indeed servers. You can run applications on them and publish them to the internet and they can be used by clients. However most SaaS tools are in fact RAD tools as clients who wish to use them have to install them on their own computers and somehow get it working with their internet service provider or company firewall. Many SaaS tools will require modification of the internet server or firewall to be used. Others will require firewall or internet connection upgrades. Finally some SaaS tools require a change of internet service providers to be used. WinSaaS does not require any of these modifications or upgrades because the service is already available as a Windows Server application. So WinSaaS offers a SaaS service to SaaS providers and website owners. When a client connects to WinSaaS they will be directed to the appropriate website or server as required.
