It will link you to their LinkedIn profile and then you can contact them that way. If you're looking for candidates who already work there, you can use the search tool below to find the correct job. Make sure you know the company or the department you're looking for before you search. The Online Services group is dedicated to providing the engineers in our organization with tools and services that allow us to efficiently write awesome code. The applications we build are Web and mobile based, making use of the latest frameworks, patterns and technologies. From the frontend to the backend, everything is built on Open Source technologies. Other Requirements: SNS Name: Innovator Quadra G56 U540 Block Diagram : In order to design the circuits, software, and firmware, I'll be using the ISPY and open source tools in conjunction with my computer and network. These are the tools I normally use when I design: Oscilloscope: I normally use a Tektronix oscilloscope for debugging and troubleshooting. Since I don't have a scope of my own, the PicaScope is great for when I'm out and about. It's probably the least expensive scope I use besides the scope I use in school. MSDN: If you're looking for a MSDN subscription, there's no catch. We'll cover whatever MSDN is required for your job. You may also purchase other goodies for free after you've been with us for six months. Computer & Software: I use a core 2 duo PC, Windows 7 (64 bit) as my operating system. For web development, I normally use Visual Studio but I'm also a full-time developer and I develop on both WebFier and the Arduino platform. Both of these platforms are open-source. Sometimes you can get away with using a specific tool or framework if the developer on staff has used it before and is willing to explain how it works. 3e33713323
