
TRUMPF TruTOPS Suite 2.1.1.0 X86 85 REPACK

the recently developed structureviewer module provides even more advanced functionality. measurements and graphical representations can be compared immediately, or measurements can be recorded for later analysis. new functions for 2d and 3d /4d engineering and cad systems now allow you to define your own conversion table for converting to the cutting and bending programs. a new module called truprofiler can automatically generate an enveloping freehand line for drawing the tube contour to form the 3d surface of a measured ductile component. the results of the contour drawing are shown graphically, in real time. the new truprofiler creates laser paths for straight, parallel and beveled cuts and is perfect for processes such as welding. the user can also create lateral or angled cuts for fitting tubes to one another or to the holes in the part they want to cut. the round, star and square notches are just some of the new functions that you can use to make any tube. finally, scnc 3d supports more geometries, curves and surface nodes including the four new family geometries. this offers the best tooling to support rapid prototyping, and reduces the need for separate re-entrant drilling operations. with modules like truprofiler, structureviewer and automatic tube profile calculation (see above), automation can be achieved in a relatively short amount of time. as such, there is little longerterm cost involved and system complexity is limited. the new lorapid 3d is designed to suit an ever-growing number of applications, such as car body sheet metal, protecting vehicle components or even spacecraft. it is also ideal for production processes involving extensive variations in sheet thickness. the new lorapid 3d can run up to one 4.5-inch and one 2.5-inch roll simultaneously, delivering total capacity of 220 mm (9 inches).this model features a tpl 160 mini turret with up to 160 m ability for material handling, a new 6v power supply, and a precision-adapted tpl 160 speed control system, offering excellent cut quality at the end of the run.

TRUMPF TruTOPS Suite 2.1.1.0 X86 85

the In50 can cut a variety of materials: steel, aluminium, brass, copper, hard aluminium, steel, fiberglass, fiberglass/carbon, wood, plastic and all types of wood. this is because the unit offers up to six different wheel and blade profiles that allow for a variety of material cutting. this means the In50 is the ideal cutting machine for the production of a broad range of machined parts, even if the desired part materials are difficult to cut. this means you can produce the desired shape in just a few seconds - without the need for dedicated tools. the trumpf In50 is extremely versatile, and is ideally suited for end products with complex shapes such as furniture, fittings, appliances and even automotive and motorcycle components. it is ideal for example for using laser cutting to cut fiberglass or fiberglass/carbon composite material. with the new trumpf In50, you have the opportunity to produce complex shapes such as swivel handles or oven door handles. the trumpf In50 makes it possible to produce different shapes with a single machine. trumpf's real-time schematic overview shows all the vital system parameters and makes it possible for the user to obtain exact information regarding the status of the machine and components. a separate touch interface allows the user to program the In50 and operate the machine. furthermore, the In50 can be operated using several user languages, including both specialised programming languages such as

perl, python and vb as well as simple languages such as javascript or php. the In50 has a dedicated wheel and blade option, as well as a kinematic drive for cutting on-line or on-tray. 5ec8ef588b
